

About Universal

Universal Software is a leading provider of global software engineering, customization & integration services. We are focused on enabling our clients with the best IT infrastructure to suit their needs, in a timely fashion and at the best value. With its presence in the United States and India, Universal can provide you with quality service to suit your needs, from consulting to outsourcing.

Universal in the Healthcare Industry

Helping organizations maximize productivity, control costs

The last two decades saw the cost of delivering healthcare skyrocket to dangerous new heights. To cope with the rapidly inflation in medication pricing plus the increased burden created by increasingly complex procedures, organizations must become more efficient so as to cut administrative overhead and improving productivity in delivering services *while not compromising the quality of care.*

In-depth vertical expertise acquired in the clinical environment

Universal Software has a long and successful track record at proposing, designing, implementing and maintaining IT systems that delivered measurable gains in productivity in the clinical environment. Whether it is creating a whole-new system that tracks and bills physician's actions across different operating rooms, updating a proven clinical decision support solution for today's world of Web browsers and PDAs, tracking mobile equipment and enabling telemetry over a wireless network, or improving reporting and billing efficiency, our "IT Gurus" have both the IT expertise and functional business knowledge to turn your most ambitious projects into reality.

Enabling an efficient, but HIPAA-compliant, flow of information

While improving service delivery and cutting administrative costs is crucial, now more than ever, organizations must also provide sufficient guarantees to patients that their personal health information will be securely kept, and that their right to privacy would be protected at all times. What was good business practice also became law, with the Health Insurance Portability and Accountability Act of 1996. Thanks to the important functional expertise of our Consultants, Universal Software can help you improving your efficiency while ensuring that all relevant HIPAA requirements are respected.

Universal's portfolio in Healthcare includes:

- Billing and other administrative systems
- Form automation
- Clinical decision support solutions
- Productivity reporting system
- PDA and wireless applications
- Database management, migration and reengineering
- Legacy/latest technology integration
- **And much more...**
